

# Entry examination – a survey of attributes

1 417 men have been examined during the entry examination. Values of 244 attributes have been surveyed with each patient. Values of 64 attributes are either codes or results of size measurements of different variables or results of transformations of the rest of the attributes. Values of all these 64 attributes are stored in the data matrix Entry. Attributes can be divided into groups according to the Table 1.

Table 1: Groups of the attributes in the entry examination

Groups of attributes	Number of attributes
identification data	2
social characteristics	6
physical activity	4
smoking	3
drinking of alcohol	9
sugar, coffee, tea	3
personal anamnesis	18
questionnaire A <sub>2</sub>	3
physical examination	8
biochemical examination	3
risk faktors	5
